DETAILED ACTION

Election/Restrictions

Applicant's election of the specie, glass bead, alumina flakes, and bismuth oxychloride in the reply filed on April 24, 2007 is acknowledged. Because applicant did not distinctly and specifically point out the supposed errors in the restriction requirement, the election has been treated as an election without traverse (MPEP § 818.03(a)).

Claims 8-9 and 15-24 are withdrawn from further consideration pursuant to 37 CFR 1.142(b) as being drawn to a nonelected species, there being no allowable generic or linking claim. Election was made **without** traverse in the reply filed on April 24, 2007.

Claims 1-7, and 10-14 have been examined herein to the extent they read on the elected invention and species.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1-7 and 10-14 are rejected under 35 U.S.C. 103(a) as being unpatentable over US 5,830,485 ('485) and EP 1 013 724 ('724), from IDS filed .

'485 teaches a colored cosmetic composition comprising filler and colorant (pigments) (see claim 1). '485 teaches that particle size of the filler as 0.8 – 180 μm (see claim 1). Depending on the cosmetic formulations, the particle size can be less than 20 μm (See for example, Examples 1 and 3 in the specification). '485 teaches one of the fillers as glass beads (see claim 1). '485 also teaches the particle size of the pigments (colorants) as 0.1 – 25 μm (See col. 3, line 2).

'724 teaches a pigment mixtures comprising titanium oxide coated alumina (Al_2O_3) and bismuth oxychloride (BiOCl) (See paragraph [0019]) with improved hiding power (see paragraph [0002]).

The references do not expressly teach the pigments taught in '724 be incorporated into the cosmetic composition of '485. The references do not expressly teach the herein recited particle size and amount.

It would have been obvious to one of ordinary skill in the art at the time of invention to incorporate the pigments taught in '724 into the cosmetic composition of '485. It would have been obvious to one of ordinary skill in the art at the time of invention to adjust the amount and particle size of the herein components.

One of ordinary skill in the art would have been motivated to incorporate the pigments taught in '724 into the cosmetic composition of '485 since incorporating the pigments taught in '724 into the cosmetic composition of '485 would improve the hiding power of the the colored cosmetic composition of '485. Furthermore, one of ordinary skill in the art would have been motivated to adjust the particle size and amount of the

herein claimed components since optimization of the result parameters is obvious as being within the purview of skilled artisan.
